

NuHUB

WindBlow Integrated Agro-Processing & Circular-Economy Hub

NuHUB is WindBlow Inc.'s proposed agro-processing and circular-economy platform for St. Vincent and the Grenadines. The project is designed to transform local crops and agricultural byproducts into higher-value products, while strengthening farmer markets, local food security, jobs and sustainable enterprise.

Purpose	Process local crops into branded, packaged, higher-value SVG-made products.
Location	WindBlow Valley / Belmont, St. Vincent and the Grenadines.
Current Stage	Partnership and financing stage. Final engineering, permits, construction and operations remain subject to financing, technical work and regulatory approvals.
Crop Focus	Root crops, fruits, ginger, turmeric, cacao, spices and other local value chains.
Product Lines	Fruit pulps, chips, flours, sauces, dried spices, cacao products, beverages, teas and packaged foods.
Circular Use	Byproducts repurposed into compost, animal feed, fertilizer inputs and future renewable-energy pathways where feasible.
Who Should Connect	Investors, development partners, farmer groups, buyers, technical partners, equipment suppliers and aligned local companies.

Immediate Discussion Areas

1. Financing structure and phased implementation. 2. Strategic crop and product priorities. 3. Buyer/offtake interest. 4. Farmer supply coordination. 5. Equipment, certification, quality and technical support.
